Back in the day when cryptography wasn't all complicated math, most analysis were done using simple logic.

The password of the zip file is decode Vignere of "KmzmetvxTvhkhw" with key **PETIR**

Here we got introduced to Vignere key.

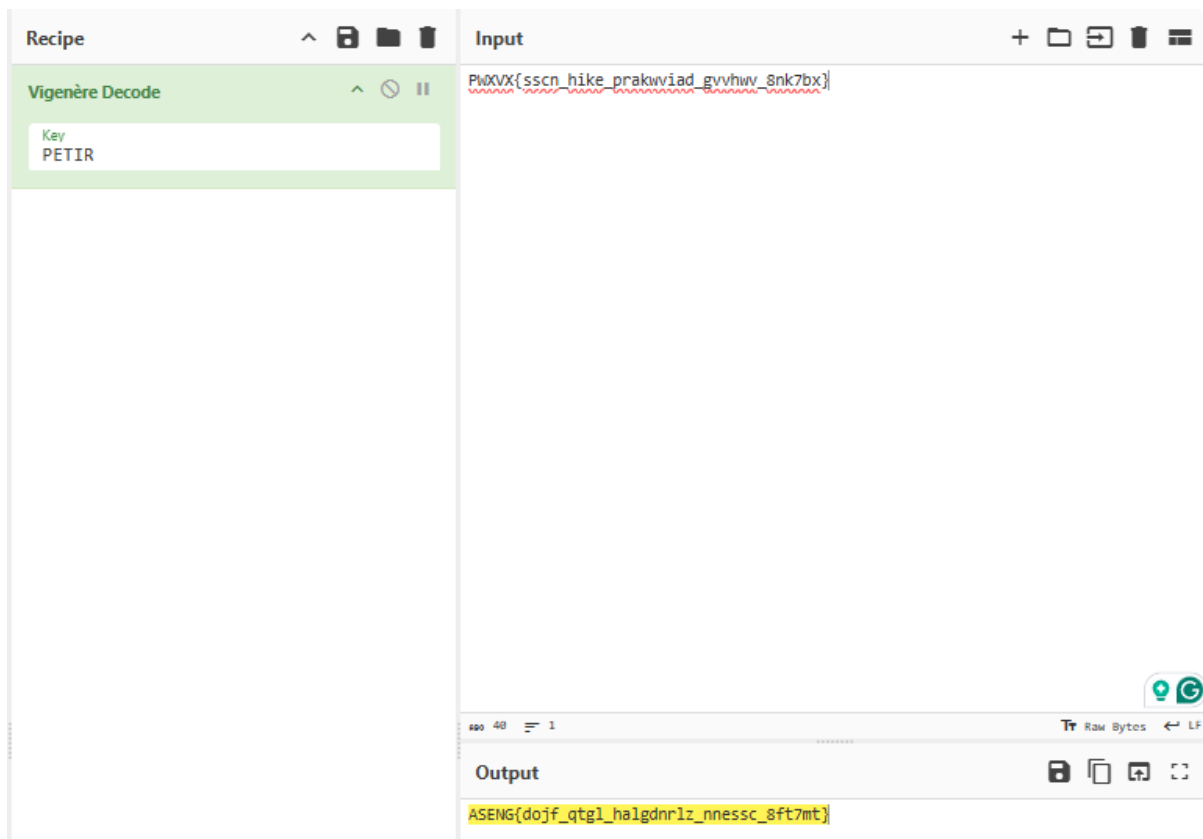

After I donwload and open the zip there seems to be a key preventing me from checking it, so im gonna use the clue given and will try to decode it.

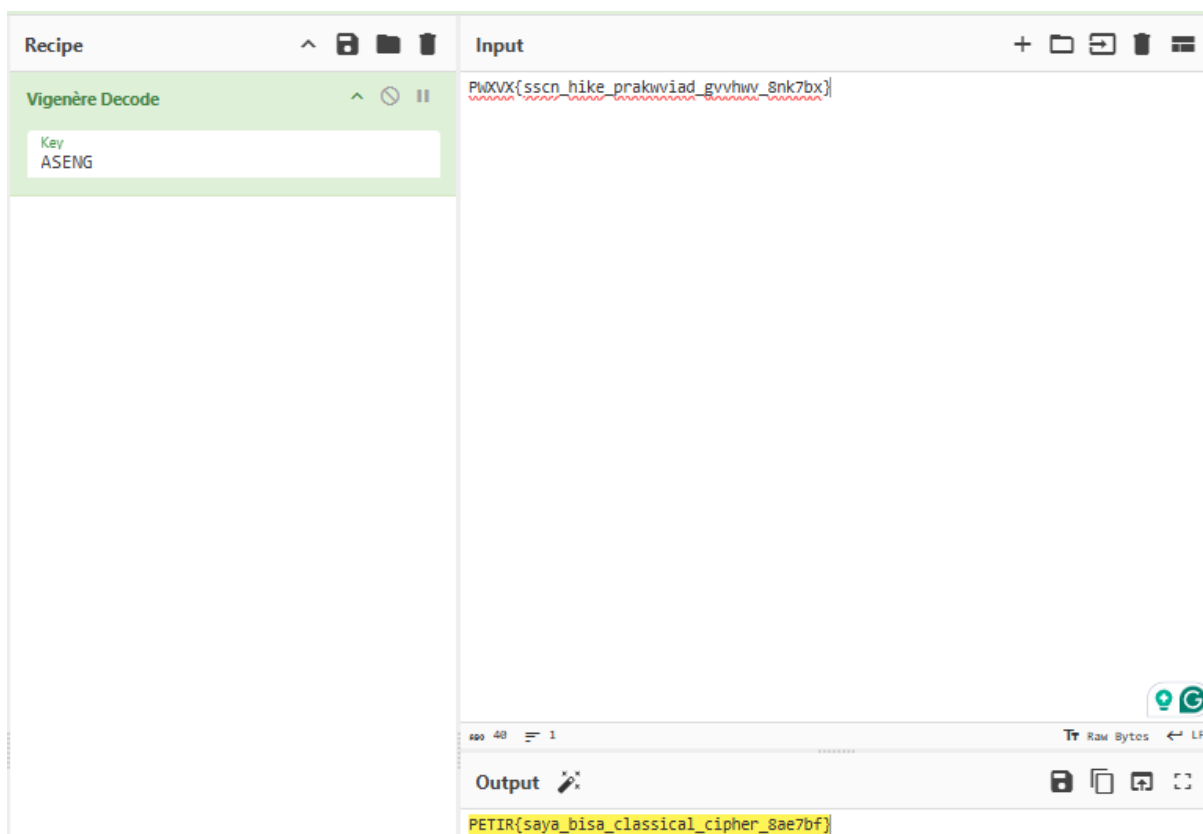

Ok now I got the key for file I will try opening it.

Seems like the flag is still encrypted in Vignere. Lets follow the clues.

This is what I get when I use PETIR again as the key, now I will try to put the first 5 Letters from the output as the key.

As expected so the flag is "PETIR{saya_bisa_classical_cipher_8ae7bf}"
